

SYCHEM FILL

Our free-standing clean bedding dispenser

Sychem provides a comprehensive range of animal care solutions, services & consumables to support research facilities in providing the best conditions for the animals in their care.

Enhance Your Cage Changing Process

The SychemFILL clean bedding dispenser is the ideal solution for enhancing the cage change process.

The system has multiple preset programmes that can be easily adjusted, and provides ease for users when selecting different cage types at the touch of a button. SychemFILL features two bedding dispensing points for the automatic filling into all cage types.

SychemFILL is highly energy-efficient, requiring only a standard socket to operate.

Class-Leading Accuracy

The SychemFILL system offers excellent dispensing accuracy ($\pm 4\%$), eliminating wastage and reducing costs. Additionally, the accuracy contributes towards reduced variability of any potential studies and results.

Ergonomic Loading

The dual mechanical and vacuum system allows for easy and comfortable reloading of bedding by transferring between hoppers. This allows for the reuse of any bedding that missed a cage, and prevents injury caused by lifting bags.

Intuitive User Interface

The 7" colour touch screen displays live graphics of the top hopper level and alerts users when bedding is required. Users can easily program in their own cage names, and adjust dispense volumes accordingly.
