How can our Projects Department support you?

Let us help transform your facility with a bespoke, space-efficient layout tailored to your needs and existing equipment.

When working with our Projects Department, we will allocate you to one of our specialist Project Managers who will work closely with our Sales Executives to understand your requirements and convert your enquiry into a technical proposal ready for review and manufacture.

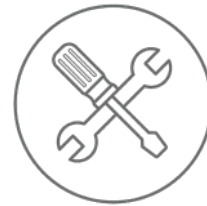

Your designated Project Manager will perform detailed site surveys, ready to transform your new or existing facility with a bespoke, space-efficient layout which can be tailored to integrate with existing equipment, based on the facility's requirements. In addition, our team will undertake detailed planning and coordination to maximise the facility throughput.

Supported by an incredible team of Project Administrators, Specialist Installation Managers, and Specialist Validation Engineers, your dedicated Project Manager will work with the installation team to track progress and ensure a smooth and easy process.

Design

Our sales and design team will work alongside you to create the best solution for your facility's needs.

Installation

Our multi-faceted installation team will transform your facility with your customised solution.

Commissioning

Our industry leading engineers will commission your capital equipment to the cycles you require.

Miele Group Member

Steelco Partnership

Sychem is proud to offer a complete range of Decontamination equipment, manufactured by our partner Steelco.

We offer a variety of equipment for use in various industries, and our expert Projects department will ensure that the installation process is as smooth as possible.

Our talented team of engineers will keep your equipment operating at its maximum efficacy by commissioning any and all of your decontamination equipment.

Visit the Steelco webpage today to discover their complete portfolio.

Can't quite find what you're looking for?
