

# SychemCHANGE

## OUR DUAL ACCESS CHANGE STATION

Sychem provides a comprehensive range of animal care solutions, services and consumables to support biomedical research facilities and provide the best conditions for the animals in their care.

### Why choose SychemCHANGE?

**SychemCHANGE utilises Active Airflow Technology to protect both animals and technicians.**

Our ISO Class 3 airflow ensures a barrier of protection between the animal and operator, limiting the potential for cross-contamination and maximising staff safety.

The dual-access workstation is compatible with most rodent cages on the market and features a fully reversible TRESPA® worksurface which is available in either a fixed raised or lowered position.

#### Easy Cage Change

SychemCHANGE has a large work area, ideal for various rodent cage sizes. The cage lid holder supplied as standard enables quick, aseptic cage changing. The station is perfect for complete, base-only cage changing and cleaning procedures.

#### Ergonomic Design

SychemCHANGE offers the best height range on the market, making it suitable for all users. At the touch of a button, the electrically driven legs can be raised or lowered to maximise the user's comfort levels and simplify the cleaning process.

#### TRESPA® Worktop

SychemCHANGE features a fully reversible TRESPA® worksurface providing a chemical and impact resistant worktop. Clients have the choice to order the worksurface in either a fixed raised or lowered position.

Winner of the  
**Queen's Award for Enterprise 2022**
