

SychemFILL

OUR FREE-STANDING BEDDING DISPENSER

Sychem provides a comprehensive range of animal care solutions, services and consumables to support biomedical research facilities and provide the best conditions for the animals in their care.

Why choose SychemFILL?

Our clean bedding dispenser is the ideal solution for enhancing the cage change process.

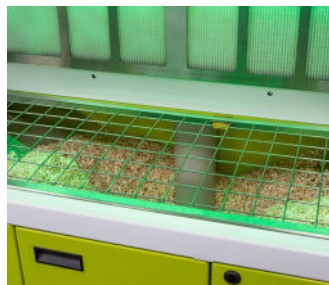

SychemFILL is designed with multiple preset programmes. These can be easily adjusted to provide ease of use for operators when selecting different cage types at just the single touch of a button.

The system features two bedding dispensing points for the automatic filling into all cage types and is highly energy-efficient, requiring only a standard socket to operate.

Excellent Accuracy

SychemFILL offers excellent dispensing accuracy ($\pm 4\%$), eliminating wastage and reducing costs. Ideal for filling cages quickly and efficiently, by dispensing precise volumes of bedding whilst reducing variability in studies.

Ergonomic Loading

The dual mechanical and vacuum system allows for easy reloading of bedding by transferring between hoppers. This allows for the reuse of any bedding that missed a cage, and prevents potential injury caused by the operator needing to lift bags of bedding.

User Interface

The clever 7" colour touch screen displays live graphics of the top hopper level and alerts users when bedding is required. The design allows the operator to easily program their own cage names, and adjust dispensing volumes to their needs.

Winner of the
Queen's Award for Enterprise 2022
