Reduce the risk of transmission of HAIs in your CSSD department.

Our Stainless Steel Spray Gun Systems

Ensure the full reprocessing of your medical devices with our stainless steel spray gun systems from RFQ.

Compatible with both water and decompressed air, our systems are designed to help reduce the risk of transmission of HAIs.

Our stainless steel spray gun systems come under the medical device directive and are a class I medical device.

About Sychem

Sychem is a UK leading provider of disinfection, sterilisation and decontamination solutions. With over 40 years of experience, our portfolio encompasses an extensive range of equipment for private healthcare settings, customisable service and validation packages for CSSDs, and infection control consumables.

Stainless Steel Design

Benefit from an increased life span with the spray gun systems stainless steel design.

Compared to systems designed with die-cast aluminium or plastic, our systems offer an improved design allowing for the use of de-ionised water in CSSDs without the risk of the material decomposing.

Full Reprocessing

Our stainless steel spray gun systems can be fully disassembled to ensure every part of the system can be reprocessed ready for its next use. This helps to reduce the risk of transmission of HAIs.

Systems are suitable for use in both washer disinfectors and sterilisers.

Easy Part Replacement

Rather than needing to replace the whole system, benefit from easy part replacement.

Should any parts of your system get lost or become damaged, easily order their replacement to increase the life span of your system.

Accessories

Customise your system depending on your needs with our comprehensive range of accessories.

Choose from a table or wall holder, compressed air or de-ionised water hose and other accessories.
